Contents History In November 1982, Autodesk launched AutoCAD R12 to the public, providing the first in-house developed CAD package for the company's first personal computer (PC). The next product, AutoCAD R13, was released in March 1984. While this was a milestone for the company, it also marked the start of what many people call the "autocad era." AutoCAD is a desktop CAD application, which, apart from a great feature list, comes with a very simple user interface and fully supports a mouse-based user interface. AutoCAD for Windows was first launched in September 1991, with AutoCAD LT for Windows following in 1993. This was the beginning of a series of software and hardware products to support AutoCAD on Windows platforms. While these systems continued to be developed and improved by Autodesk, a number of other companies entered the market with their own software based on the AutoCAD R12 technology. These include CorelDraw (1991), Microstation (1993), Bentley MicroStation (1993), and Tekla (1998). AutoCAD LT's target market was smaller, more cost-effective CAD applications that can be used for day-to-day projects. AutoCAD NT for Windows was released in July 1999, in the same month as the release of AutoCAD LT for Windows. The Windows NT operating system came with a number of new features, such as the ability to manage multiple user accounts and increased security. AutoCAD NT (now called AutoCAD 2009 for Windows) was designed to replace AutoCAD LT with a greater degree of compatibility. While most of the features of AutoCAD 2000 (including Windows 2000) were also present in AutoCAD NT, there were a number of fundamental differences between the two. Most notably, AutoCAD NT has a multi-user capability. Unlike AutoCAD LT, this allows users to work on the same drawing concurrently. The user interface (UI) also saw significant changes. AutoCAD 2000 was the first version of AutoCAD to have a new UI, which was similar to the one used by other Aut

Recent Posts: AutoCAD Release Notes Markup Support, Previous The previous AutoCAD markup support was marked by awkward or error-prone interfaces. This new markup makes creation, updating, and use of markup more consistent and robust. Markup Support, New The new markup gives you control over which markup is applied to which text. You can explicitly apply markup to every text object (including rectangles, text paths, tables, and drawings), or you can select a subset of objects to apply markup to. The text objects that can have markup applied to them include rectangles, text paths, tables, drawings, and other text objects. You can also use a special reference object, the Text Markup Frame, to apply markup to groups of objects. Note: A text frame is an object that shows the text for one or more text objects. It is not meant to represent the text itself. The text object is the actual object that contains the text, such as a text box or lettering. A text frame does not contain text. You can display text in a text frame only if the text is selected as part of a text object. Selecting the Text Markup Frame When you want to apply a text markup to a group of objects, select the Text Markup Frame. The Text Markup Frame is a reference object that indicates the objects to which you want to apply a text markup. When you select the Text Markup Frame, you can select any of the following text objects: Drawings and annotations: Objects such as figures, tags, and text boxes Lines, polylines, and text styles: Objects such as lines, polylines, and text styles Fill and border styles: Objects such as solid fill styles and frame styles Tables: Objects such as tables, text frames, and columns Text frames: Objects such as text
