
Nunns Applied Respiratory Physiology 7th Pdf 82

(2010) Nunn Applied Physiology of Respiration, 7th ed. The drug acts on cell membranes, disrupting their functions, which leads to disruption of cellular respiration, antioxidant protection, water balance and, as a result, to the development of a number of pathologies [7]. Fluoroquinolone of the penicillin series has a wide range of antimicrobial activity, including against microorganisms resistant to other antibiotics of the penicillin group. This leads to an increase in the effectiveness of treatment, an increase in the safety of treatment and a decrease in the toxic effect on the body in case of repeated diseases. In addition, the drug has the ability to completely inactivate human ribonuclease, which allows it to be used in regimens that do not require intravenous administration [1, 2]. Patients complained of a runny nose, rashes, feeling unwell, weakness, fever, swollen lymph nodes. The initial administration of the drug against the background of the use of antibacterial agents led to the relief of acute rhinitis and a reduction in the duration of the disease. During therapy with the drug, a positive dynamics of the general condition of patients was noted, complaints of weakness decreased, temperature decreased, swelling of the nasal mucosa decreased. When re-evaluating after 12-14 days, there was no recurrence of the disease. Recovery occurred in 90% of cases, treatment was completed earlier in 5% of patients, improvement was noted in 1 patient. During repeated visits to the clinic, an improvement in the condition of patients was noted. The primary information obtained during the analysis of this group of patients is presented in the table.

Group	Patient	Control	group
Primary	Treatment	Reassessment	Notes: * - indicators may vary depending on the effectiveness of the treatment.

Primary data are presented in Table 1. Table 1 The root causes of the disease and the initial stages Treatment regimen Elimination of the root cause of the recurrence of the disease Past illnesses secondary course of the disease coli, streptococcus Obstructive bronchitis, laryngitis Rhinopharyngitis, sinusitis, frontal sinusitis Oftany, scarlet fever Psycho-emotional stress Portable infections Dysbacteriosis The composition of the drug includes the active substance - fluoroquinolones. The group of fluoroquinolones includes three drugs: fluorofluorocinoma,
